AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

Claims 1-16 (canceled).

17. (previously presented) A purified recombinant DNA of human immunodeficiency virus type 1 (HIV-1), wherein the DNA comprises the sequence:

18. (previously presented) The purified recombinant DNA of claim 17, wherein said nucleic acid is labeled with a label selected from the group consisting of a radioisotope, an enzyme, a fluorescent label, and a chromophore label.

19. (previously presented) A method of using the purified recombinant DNA of claim 17 for detecting the presence of HIV-1 RNA comprising:

(a) providing a cell-free supernatant of a biological fluid comprising cells infected with HIV-1;

(b) disrupting HIV-1 virions in the cell-free supernatant to release HIV-1 RNA; and

(c) detecting the presence of HIV-1 RNA by contacting the HIV-1 RNA with the purified recombinant DNA of claim 17 and detecting hybridization between the HIV-1 RNA and the purified recombinant DNA.

20. (previously presented) The method of claim 19, wherein the biological fluid is blood.

21. (previously presented) A method of using the purified recombinant DNA of claim 18 for detecting the presence of HIV-1 RNA comprising:

(a) providing a cell-free supernatant of a biological fluid comprising cells infected with HIV-1;

(b) disrupting HIV-1 virions in the cell-free supernatant to release HIV-1 RNA; and

(c) detecting the presence of HIV-1 RNA by contacting the HIV-1 RNA with the purified recombinant DNA of claim 18 and detecting hybridization between the HIV-1 RNA and the purified recombinant DNA.

22. (previously presented) The method of claim 21, wherein the biological fluid is blood.

23. (new) A purified fragment of the DNA of claim 17, wherein said fragment hybridizes to the DNA of claim 17 under stringent conditions.

24. (new) A purified recombinant DNA of human immunodeficiency virus type 1 (HIV-1) that hybridizes to the DNA of claim 17 under stringent conditions.

25. (new) A method for detecting the presence of HIV-1 RNA comprising:

(a) providing a cell-free supernatant of a biological fluid comprising cells infected with HIV-1;

(b) disrupting HIV-1 virions in the cell-free supernatant to release HIV-1 RNA; and

(c) detecting the presence of HIV-1 RNA by contacting the HIV-1 RNA with a purified recombinant DNA that hybridizes to the DNA of claim 17 and detecting hybridization between the HIV-1 RNA and the purified recombinant DNA.
